

How to keep your home cool

- ☀️ **Close blinds and curtains** during the day
- ☀️ **Open windows** (if it is safe to) when the **air feels cooler outside**, such as at night
- ☀️ **Use electric fans** if the air temperature is below 35°C (do not aim directly at yourself/others as can lead to dehydration)
- ☀️ Ensure that the **heating and electrical equipment** that are not in use **are turned off**
