Executive summary

Some of the key results contained within this report are set out below:

1. Funding position

- Using the agreed assumptions, the Fund had a funding position of 121% as at 31 March 2025, which has increased from 116% at the 2022 valuation.

2. Contributions

- Individual employer contributions are set out in Appendix 8 in the Rates and Adjustments Certificate to cover the period from 1 April 2026 to 31 March 2029.

3. Methods and assumptions

- The assumptions are set out in Appendix 2 and we believe they are appropriate for the 31 March 2025 valuation. The key assumptions used are a discount rate assumption of 5.1% p.a. and a CPI inflation assumption of 2.7% p.a.
- Inflation experience has been significant since the 2022 valuation, with pension increases of 10.1% in April 2023 and 6.7% in April 2024, increasing the projected benefit cashflows and the liabilities.

4. Investment performance

- Investment returns have been volatile since the previous valuation. Fund returns were broadly in line with the discount rate set at 2022, which all else being equal, results in a stable funding level at 2025.
- An increase in the discount rate net of inflation (i.e. the real discount rate) has improved the funding level.

5. Regulatory developments

- There have been a number of important regulatory developments since the 2022 valuation which have impacted the valuation including McCloud, developments in climate risk analysis and the additional reporting requirements on Gender Pensions Gap.
- Details of how we have approached each development, as well as any relevant outcomes, are set out in this report.

Comparison with other LGPS funds

The funding position and resulting contributions are based on assumptions about future factors such as target investment returns, inflation and life expectancy. As these are uncertain, different assumptions and funding parameters are used by each LGPS fund to reflect their own views, circumstances and strategic objectives. These differences (amongst other factors including crucially the previous funding level and employer short and long-term affordability) will lead to differences in funding positions and contributions across LGPS funds.

To support comparison, LGPS funds are required to report a funding position on a consistent set of assumptions (called the “SAB funding level”). The Fund’s SAB funding level at 31 March 2025 is 133%.

IMPORTANT NOTE: the SAB assumptions are to allow comparison only, they are not intended to be appropriate for funding purposes or setting contribution rates. As such, this result has no impact on the Fund’s funding strategy or employer contribution rates.

Background

We have been asked by Wandsworth Council, the administering authority for the Wandsworth Pension Fund (the Fund), to carry out an actuarial valuation of the Fund as at 31 March 2025. The Fund is part of the Local Government Pension Scheme (LGPS), a defined benefit statutory scheme administered in accordance with the Local Government Pension Scheme Regulations 2013 (the Regulations) as amended.

The purpose of the valuation is to review the financial position of the Fund and to set appropriate contribution rates for each employer in the Fund for the period from 1 April 2026 to 31 March 2029 as required under Regulation 62 of the Regulations.

This report is provided further to earlier advice dated 31 July 2025 and 7 October 2025, which set out the background to the valuation and explained the underlying methods and assumptions derivation.

We would be pleased to discuss any aspect of this report in more detail.

Compliance statements

This advice is provided in our capacity as Fund Actuary.

This report summarises the results of the valuation and is addressed to the administering authority of the Fund. It is not intended to assist any user other than the administering authority in making decisions or for any other purpose and neither we nor Barnett Waddingham LLP accept liability to third parties in relation to this advice.

This advice complies with Technical Actuarial Standards (TASs) issued by the Financial Reporting Council – in particular TAS 100: General Actuarial Standards and TAS 300: Pensions.

Valuation methodology

Setting contributions

The contribution rates consist of two elements, the primary rate and the secondary rate:

- The **primary rate** for each employer is the employer's future service contribution rate (i.e. the rate required to meet the cost of future accrual of benefits) expressed as a percentage of pay.
- The **secondary rate** is an adjustment to the primary rate to arrive at the total rate each employer is required to pay (for example, to allow for deficit recovery) over a specified "recovery period". The secondary rate may be expressed as a percentage of pay or a monetary amount.

Regulation 62 specifies four requirements that the actuary "must have regard" to:

- 1 The existing and prospective liabilities arising from circumstances common to all those bodies
- 2 The desirability of maintaining as nearly a constant a primary rate as possible
- 3 The current version of the administering authority's Funding Strategy Statement (FSS)
- 4 The requirement to secure the "solvency" of the pension fund and the "long-term cost efficiency" of the Scheme, so far as relating to the pension fund

The wording of the second objective is aimed towards the primary rate rather than taking into account the surplus or deficit of the employer. We believe that if Fund employers achieve reasonably stable total individual employer rates over the long term, then this will also meet the regulatory aim.

The FSS guidance includes further details in the glossary, as follows:

- **"solvency"** means contributions should be set at "such a level as to ensure that the scheme's liabilities can be met as they arise". It is not regarded that this means that the pension fund should be 100% funded at all times, and

- **“long-term cost efficiency”** means that contributions must not be set at a level that gives rise to additional costs. The contributions set will be deemed to ensure long-term cost efficiency if the rate of employer contributions is sufficient to make provision for the cost of current benefit accrual, with an appropriate adjustment to that rate for any surplus or deficit in the fund.

Secondary rate “recovery period”

The recovery period for individual employers varies across the Fund. The administering authority’s approach to setting recovery periods is set out in the FSS. Where there is a surplus, this may also be reflected in contribution rates in line with the Fund’s FSS.

The primary and secondary rate of the individual employer contributions payable are set out in the Rates and Adjustments Certificate in Appendix 8. These will differ from the whole Fund primary rate and differ from each other, as they are either based on the employer’s own membership and experience or they are the employer’s share of the contributions payable within a pool of employers.

Assumptions used

We have considered the four requirements of Regulation 62 when providing our advice and choosing the method and assumptions used.

A number of reports and discussions have taken place with the administering authority and, where required, its investment advisors before agreeing the assumptions to calculate the results and set contribution rates.

In particular:

- The assumptions report dated 31 July 2025 provided information on the background to the method and derivation of the assumptions;
- The mortality analysis report dated 25 September 2025 provided proposed mortality and demographic assumptions to be used at the 2025 valuation;
- The initial results report dated 7 October 2025 provided information and results on a whole fund basis as well as background to the method and derivation of the assumptions;
- The follow-up assumptions note dated 21 October 2025 confirmed the agreed actuarial assumptions following meetings on 7 and 17 October 2025.
- The climate analysis report dated 31 October 2025 considered climate risk in the context of the Fund’s 2025 actuarial valuation. It considers whether the 2025 valuation funding strategy is sufficiently robust in the context of this climate scenario analysis and any potential contribution impacts.
- The FSS which will confirm the approach in setting employer contributions.

Note that not all of these documents may be in the public domain and may be restricted to the administering authority which has no obligation to share them with any third parties.

The Fund's FSS has been reviewed in collaboration with the administering authority to ensure that it is consistent with this approach. The FSS complies with the updated FSS guidance published in January 2025 by the Scheme Advisory Board's Compliance and Reporting Committee, the Chartered Institute of Public Finance and Accountancy (CIPFA) and the Ministry of Housing, Communities and Local Government (MHCLG)¹. We confirm that in our opinion the agreed assumptions are appropriate for the purpose of the valuation. The assumptions in full are set out in Appendix 2.

Valuation of liabilities

To calculate the value of the liabilities, we estimate the future cashflows which will be made to and from the Fund throughout the future lifetime of existing active members, deferred benefit members, pensioners and their dependants.

We estimate the total value of these projected benefit cashflows as at 31 March 2025, using the membership data and past service at 31 March 2025 and the assumptions set out in Appendix 2, to be c.£6.6bn.

We then discount these projected cashflows using the discount rate assumption which is essentially a calculation of the amount of money which, if invested now, would be sufficient together with the income and growth in the accumulating assets to make these payments in future, using our assumption about investment returns adjusted by the administering authority's chosen level of prudence (as measured by the chosen success probability).

This amount is called the present value (or, more simply, the value) of members' benefits. Separate calculations are made in respect of benefits arising in relation to membership before the valuation date (past service) and for membership after the valuation date (future service).

To produce the future cashflows or liabilities and their present value we need to formulate assumptions about the factors affecting the Fund's future finances such as inflation, salary increases, investment returns, rates of mortality and staff turnover etc. The assumptions used in projecting the future cashflows in respect of both past service and future service are summarised in Appendix 2.

Valuation of assets

We have been provided with Fund audited accounts for each of the three years to 31 March 2025.

The market asset valuation as at 31 March 2025 was £3.16bn. Please note that this excludes members' additional voluntary contributions (AVCs).

For the purposes of the valuation, we use a smoothed value of the assets rather than the market value. The financial assumptions that we use in valuing the liabilities are smoothed around the valuation date so that the market conditions used are the average of the daily observations over the period 1 January 2025 to 30 June 2025. Therefore, we value the assets in a consistent way to the liabilities and apply the same smoothing adjustment to the market value of the assets. The smoothed assets also include a 10% volatility reserve deduction which may be used in the instance of future adverse experience to help achieve stability in funding.

The smoothed asset valuation as at 31 March 2025 was £2.89bn. This was based on a smoothing adjustment of 101.7% and a 10% volatility reserve.

The Fund's long-term investment strategy has been taken into consideration in the derivation of the discount rate assumption as has the administering authority's chosen level of prudence (as measured by the chosen success probability). The investment strategy is set out in the Fund's Investment Strategy Statement (ISS) that is available on the Fund's website.

¹ <https://lgpsboard.org/wp-content/uploads/2025/12/FSS-guidance-Final-January-2025-1.pdf>

Results

Funding position

A comparison is made of the value of the existing assets with the value of the accrued liabilities. If there are more assets than liabilities, then there is a surplus. If the converse applies there is a deficit. Using the assumptions summarised in Appendix 2, the funding position is set out in the graph below. This shows the funding position of the Fund at the current and previous valuation dates.

There was a surplus of £502m in the Fund at the valuation date, corresponding to a funding level of 121%. The previous valuation was carried out as at 31 March 2022 by Barnett Waddingham. The results are summarised in the valuation report dated 30 March 2023 and reported a surplus of £350m.

Contribution rates

Primary rate

Using the assumptions summarised in Appendix 2, the resulting average primary rate across the whole Fund is set out in the table below (after allowing for member contributions). This includes a comparison to the primary rate at the previous valuation.

The primary rate for the whole Fund is the theoretical primary rate of all employers in the Fund assessed on the ongoing basis using the assumptions summarised in Appendix 2.

Primary rate	2025 valuation of payroll p.a.	2022 valuation of payroll p.a.
Average total future service rate	22.5%	26.7%
Less average member rate	6.7%	6.7%
Fund primary rate	15.8%	20.0%

Active members pay contributions to the Fund in line with the rates required under the Regulations.

Please note that expenses are allowed for in the derivation of the discount rate and therefore we make no explicit allowance in the primary rate for expenses.

In Appendix 8 we also disclose the sum of the secondary rates for the whole Fund for each of the three years beginning 1 April 2026.

Projected funding position

Based on the assumptions as set out in Appendix 2 and the contributions certified and set out in Appendix 8, we estimate that the funding position of the whole Fund will be 120% by 31 March 2028, the next valuation date.

This projection is based on the assumptions made for this valuation and contributions being paid at the agreed amounts.

This projection does not allow for any actual experience since 31 March 2025 nor any other risks or uncertainties. Some of these additional risks are set out later in this report and in Appendix 3.

Standardised basis

Following the funding valuation, a "Section 13" report (prepared under Section 13 of the Public Service Pensions Act 2013) will be prepared to report on whether the following aims are achieved: compliance, consistency, solvency and long-term cost efficiency, and to identify any funds that cause concerns.

As part of our calculations we have considered the results on a standardised basis as set by the Scheme Advisory Board (SAB). We are required to provide the SAB with the results for the Fund for comparison purposes.

The standardised basis is set using assumptions advice from the Government Actuary's Department (GAD) with some of the assumptions used being set locally at the Fund level (such as mortality) and some are set at Scheme level (including all the financial assumptions).

It is not used to set contributions as it does not reflect the Fund's investment strategy or the administering authority's attitude to risk; contributions are set using the funding basis.

The results on the standardised basis as at 31 March 2025 are set out in the dashboard in Appendix 7. The dashboard should assist readers in comparing LGPS valuation reports and the information will be used by GAD in their "Section 13" report.

Reconciliation to previous valuation

Funding position

The previous valuation revealed a surplus of £350m compared to the surplus of £502m at the 2025 valuation. The key factors that have influenced the funding level of the Fund over the period are illustrated in the chart below.

Commentary

- Contributions have been broadly in line with the cost of accrual and the average return was broadly in line with the 2022 discount rate. Therefore neither factor has had a significant impact on the results.
- Market conditions are more favourable as at 31 March 2025, which has led to a gain of £358m.
- The gain from the change in market conditions has been partially offset by higher than assumed pension increases, which led to a loss of £186m.
- In addition, updating the mortality assumptions to allow for an increase in life expectancies resulted in a further loss of £94m.

Primary contribution rate

The previous valuation resulted in a whole Fund primary rate of 20.0% of pensionable pay compared to the whole Fund primary rate of 15.8% of pensionable pay at the 2025 valuation. The reasons for the change in the primary rate are set out in the reconciliation chart below.

Comparing experience with assumptions

A comparison of the actual demographic experience of members of the Fund over the intervaluation period, with that assumed by the assumptions adopted at the last valuation in 2022 is shown in the graph below. The graph also shows how the assumptions adopted for this valuation would have compared with those adopted at 2022.

Sensitivities to the liabilities

The results set out in this report are based on a particular set of assumptions. The actual cost of providing the benefits will depend on the actual experience, which could be significantly better or worse than assumed. The sensitivity of the results to some of the key assumptions is set out in the table below.

The figures in the table are shown relative to the surplus of £502m and funding level of 121% on the agreed funding basis as at 31 March 2025.

2025 sensitivity analysis of funding position	2025 Valuation basis £bn	Decrease discount rate by 0.1% p.a. £bn	Increase CPI inflation by 0.1% p.a. £bn	Increase salary assumption by 0.5% p.a. £bn	Reduce mortality rate by 10% £bn
Smoothed asset value	2.89	2.89	2.89	2.89	2.89
Total past service liabilities	2.39	2.43	2.43	2.40	2.44
Surplus / (Deficit)	0.50	0.47	0.47	0.49	0.45
Funding level	121%	119%	119%	120%	118%

Sensitivities to the primary rate

The calculated primary rate required to fund benefits as they are earned from year to year will also be affected by the particular set of assumptions chosen. The sensitivity of the primary rate to changes in some key assumptions is shown below. Please note that the primary rate set out below does not include any adjustment via the secondary rate. The total contribution rate payable by employers will be a combination of the primary rate and a secondary rate adjustment, further details can be found in Appendix 8.

The figures in the table are shown relative to the whole Fund primary rate of 15.8% of Pensionable Pay on the agreed funding basis as at 31 March 2025.

2025 sensitivity analysis of primary rate	2025 Valuation basis of payroll p.a.	Decrease discount rate by 0.1% p.a. of payroll p.a.	Increase CPI inflation by 0.1% p.a. of payroll p.a.	Increase salary inflation by 0.1% p.a. of payroll p.a.	Reduce mortality rate by 10% of payroll p.a.
Average total future service rate	22.5%	23.1%	23.1%	22.5%	22.9%
Less average member rate	6.7%	6.7%	6.7%	6.7%	6.7%
Fund primary rate	15.8%	16.4%	16.4%	15.8%	16.2%

Further comments

Funding Strategy Statement (FSS)

The assumptions used for the valuation have been documented in a revised Funding Strategy Statement agreed between the Fund Actuary and the administering authority.

Risks

There are many factors that affect the Fund's funding position and could lead to the Fund's funding objectives not being met within the timescales expected. Some of the key risks that could have a material impact on the Fund are:

- Employer covenant risk
- Investment risk
- Inflation risk
- Mortality risk
- Member options risk
- Regulatory risk
- Climate risk

The sensitivity of the funding results to some of these risks was set out in the sensitivities section of this report. Please note that this is not an exhaustive list. Further information on these risks and more can be found in our initial results report and will be set out in greater detail in the FSS.

Post valuation events

Our funding model is designed to help withstand short-term volatility in markets as it is a longer-term model. We use smoothed assumptions over a six-month period with the ultimate aim of setting stable contributions for employers.

The valuation approach and assumptions are not based on gilt yields and the discount rate is derived from the long-term future expected returns on each asset class with a deduction for uncertainty and risk (our prudence adjustment) in line with the administering authority's chosen level of prudence (as measured by the chosen success probability).

We have considered whether there are any developments since 31 March 2025 that are significant enough to review our approach. At this stage, we do not feel that the anticipated effect on the long-term funding position of any market movements is significant enough to revise our approach.

Nevertheless, due to the ongoing uncertainty around the shorter-term impact of these issues, we have considered these issues with the administering authority in setting the employer contribution rates to ensure that contributions into the Fund remain appropriate.

We will continue to monitor the Fund's funding position and raise any individual employer cases with the Fund that we consider need any special attention. The impact of these events will be fully considered as part of the 2028 valuation when we revisit employer contributions.

The next formal valuation is due to be carried out as at 31 March 2028. However, we would recommend that the financial position of the Fund is monitored regularly during the period leading up to the next formal valuation.

Rates and Adjustments Certificate

The primary and secondary contributions payable by each employer have been set out in Appendix 8 in the Rates and Adjustments Certificate in accordance with Regulation 62 of the Regulations and cover the period from 1 April 2026 to 31 March 2029. In this certificate no allowance will be made for additional costs arising which need to be met by additional contributions by the employer such as non-ill health early retirements.

The contributions in the Rates and Adjustments Certificate are set so that each employer's assets (including future contributions) are projected to be sufficient to cover the benefit payments for their members, on the assumptions set out in this report.

Where there is currently a deficit for an individual employer, recovery of this deficit is targeted in line with the Fund's FSS and all employers are projected to be fully funded after a recovery period length of no more than 6 years from 1 April 2026.

This document has been agreed between the administering authority and the Fund Actuary. Contributions have been set which in our opinion meet the regulatory requirements and the funding objectives set out in the Fund's FSS.

This report must be made available to members on request.

Appendix 1 Summary of data and benefits

Membership data

The membership data has been provided to us by the administrators of the Fund.

We have relied on information supplied by the administrator and the administering authority being accurate.

The membership data has been checked for reasonableness and we have compared the membership data with information in the Fund's accounts.

The numbers in the tables overleaf relate to the number of records and so will include members in receipt of, or potentially in receipt of, more than one benefit.

Any missing or inconsistent data has been queried with the Fund and estimated where necessary. Changes to the data have been summarised in the "Data processing & estimating summary" report dated 17 February 2026. Whilst this should not be seen as a full audit of the data, we are happy that the data is sufficiently accurate for the purposes of the valuation.

Benefits

Full details of the benefits being valued are set out in the Regulations as amended and summarised on the [LGPS website \(https://www.lgpsmember.org/\)](https://www.lgpsmember.org/).

We have made no allowance for discretionary benefits.

Membership summary

A summary of the membership data used in the valuation is as follows. The membership data from the previous valuation is also shown for comparison.

Please note that the average ages at 31 March 2025 are weighted by salary for active members and by pension for deferred and pensioner/dependant members, while the average ages at 31 March 2022 are weighted by liability.

Data used	Data at 31 March 2025			Data at 31 March 2022		
Active members	Number	Pensionable pay £m	Average age (salary-weighted)	Number	Pensionable pay £m	Average age (liability-weighted)
Males	2,701	95	47	2,710	80	54
Females	8,587	214	47	8,252	171	53
Total	11,288	309	47	10,962	251	54
Deferred members (including undecided)	Number	Pension £m	Average age (pension-weighted)	Number	Pension £m	Average age (liability-weighted)
Males	5,325	10	51	5,179	9	52
Females	15,180	24	51	14,688	19	52
Total	20,505	34	51	19,867	28	52
Pensioner and dependant members	Number	Pension £m	Average age (pension-weighted)	Number	Pension £m	Average age (liability-weighted)
Males	3,855	44	74	3,770	37	71
Females	7,965	45	73	7,307	36	70
Total	11,820	89	74	11,077	73	70

Projected retirements

In the table below we have set out the number of members who are assumed to reach retirement age over the period from 1 April 2025 to 31 March 2029 as required under the Regulations.

Members may retire for a number of reasons including reaching normal retirement age, retiring through ill-health or redundancy. The amounts set out in the table below are the new retirement benefit amounts as at the current valuation date that are assumed to come into payment in each of the intervaluation years.

Projected new benefits		
Year to	Number of members	Retirement benefits £m's
31 March 2026	1,380	13
31 March 2027	1,112	11
31 March 2028	1,071	10
31 March 2029	3,353	9

Guaranteed Minimum Pension (GMP) equalisation and indexation

As with the previous valuation, we have assumed that the Fund will pay limited increases for members that have reached State Pension Age (SPA) by 6 April 2016, with the Government providing the remainder of the inflationary increase.

For members that reach SPA after this date, we have assumed that the Fund will be required to pay the entire inflationary increase.

Appendix 2 Summary of assumptions

A summary of the assumptions adopted for the valuation at 31 March 2025 and as at 31 March 2022 is set out below.

Assumptions	2025 valuation	2022 valuation
Financial assumptions (p.a.)		
CPI inflation	2.7% p.a.	2.9% p.a.
Salary increases	3.7% p.a.	3.9% p.a.
Discount rate	5.1% p.a.	4.4% p.a.
Pension increases on GMP	Funds will pay limited increases for members that have reached SPA by 6 April 2016, with the Government providing the remainder of the inflationary increases. For members that reach SPA after this date, we have assumed that Funds are required to pay the entire inflationary increase.	
Demographic assumptions		
Post-retirement mortality		
Pensioners	90% of S4PXA for males/females	110% of S3PXA for males/females
Dependants	80%/85% of S4DXA for males/females	110%/90% of S3DXA for males/females
Actives and deferreds (pre-retirement mortality)	100% / 110% of the assumed rates within GAD's 31 March 2016 LGPS (E&W) valuation for males / females	100% / 95% of the assumed rates within GAD's 31 March 2016 LGPS (E&W) valuation for males / females
Actives and deferreds (post-retirement mortality)	As for current pensioner assumptions	As for current pensioner assumptions
Future improvements		
CMI model	CMI_2024	CMI_2021
Long-term rate of improvement (p.a.)	1.50%	1.25%
Initial addition parameter (p.a.)	0.0%	0.0%
Other parameters	Overlay half-life of 1 year	2020 and 2021 weight parameter of 5%
Retirement assumption	Weighted average of the retirement ages for each individual tranche of benefit	Weighted average of the retirement ages for each individual tranche of benefit
Pre-retirement decrements	As per GAD's 31 March 2020 LGPS (E&W) valuation, except with no salary scale and no ill-health retirement rates	As per GAD's 31 March 2016 LGPS (E&W) valuation, except with no salary scale and no ill-health retirement rates
50:50 assumption	Based on actual 50:50 member data	Based on actual 50:50 member data

Assumptions

2025 valuation

2022 valuation

Commutation		Members are assumed to commute pension to receive 50% of the maximum available tax-free cash on retirement	Members are assumed to commute pension to receive 50% of the maximum available tax-free cash on retirement
Family statistics			
	% with qualifying dependant	75% (M) / 65% (F)	75% (M) / 70% (F)
	Age difference	Males 3 years older	Males 3 years older

Demographic assumptions – sample rates

The following tables set out some sample rates of the demographic assumptions used in the calculations. These are based on the GAD analyses of the LGPS in England and Wales, as set out on the previous pages.

Ill-health early retirements

Certain employers, primarily those in the Wandsworth Academy pool, finance ill-health retirements using a loading to their contribution rates.

In the table below we set out some sample rates from the GAD tables used:

Age	Males	Females
25	0.01%	0.00%
30	0.01%	0.01%
35	0.02%	0.01%
40	0.04%	0.03%
45	0.09%	0.06%
50	0.18%	0.13%
55	0.36%	0.28%
60	0.74%	0.19%
65	1.51%	0.29%

Please note the above rates are the raw decrements as set by GAD. Our assumption is that there will be 50% of the number of ill-health retirements assumed by GAD. In addition, we assume that 75% / 15% / 10% of ill-health retirements are in Tier 1 / Tier 2 / Tier 3, respectively, for both males and females.

For all other employers, we assume zero incidences of ill-health retirements at all ages for both males and females.

Death before retirement

In the table below we set out some sample rates from the GAD tables used:

Age	Males	Females
25	0.02%	0.01%
30	0.03%	0.01%
35	0.05%	0.02%
40	0.06%	0.03%
45	0.09%	0.05%
50	0.13%	0.08%
55	0.21%	0.12%
60	0.32%	0.19%
65	0.50%	0.29%

Please note the above rates are the raw decrements as set by GAD. We have applied a 100%/110% multiplier to the rates assumed by GAD for males/females.

Allowance for withdrawals

Active members are assumed to leave service at the following sample rates:

Age	Males	Females
25	14%	13%
30	10%	10%
35	8%	8%
40	6%	7%
45	5%	6%
50	4%	5%
55	3%	4%
60	3%	3%
65	2%	2%

Appendix 3 Regulatory uncertainties

There are currently a few important regulatory uncertainties surrounding the 2025 valuation as follows:

- Long-term impact of the McCloud and Sargeant cases;
- Cost management reviews which could affect future and historic LGPS benefits;
- Virgin Media case;
- Gender Pensions Gap reporting; and
- Climate change risks and opportunities;

Although it is unclear what impact these uncertainties will have on the future benefits of individual members, we have considered these issues in the assumptions used to set the contribution rates for employers.

McCloud

At the 2022 valuation we estimated the impact of the McCloud ruling for each active member based on the membership data available.

This included looking back at historic valuation data to estimate a payroll history for each member which was then used to determine the equivalent service accrued in the final salary scheme had it not been discontinued.

Due to the lack of sufficient data as well as direction from the Ministry of Housing, Communities and Local Government (MHCLG), no estimates were made for deferred and pensioner members.

The LGPS McCloud remedy regulations became law on 1 October 2023. Since the 2022 valuation Funds have been collecting additional data for each member to allow for a more data-driven approach at the 2025 valuation which relies less on actuarial and data estimates.

As part of the 2025 valuation, we calculated each member's liabilities which includes an allowance for the McCloud underpin for eligible members as determined by the remedy regulations. The liabilities calculated as part of the 2025 valuation reflects the fact that eligible members may receive a pension uplift at retirement if their benefits would have been higher had they continued to accrue service in the discontinued final salary scheme until 31 March 2022.

There still remains uncertainty over the long-term effects of the McCloud judgment but where data has been available, we have been able to estimate the impact of McCloud on individual employers and funding positions and contributions have been set accordingly.

Cost management reviews

Further cost control and cost management reviews will be carried out and may lead to future benefit changes. However, as the aim of this monitoring is to keep the cost of benefits within an affordable range, we can be relatively comfortable that future reviews will not have a significant impact on the value we placed on the liabilities and so did not make any explicit allowance for these.

Virgin Media case

This issue relates to a case where missing actuarial certification resulted in historic benefit changes being void. The Department for Work and Pensions (DWP) published an announcement on 5 June 2025 noting the plan to introduce new legislation in response to the Virgin Media vs NTL Trustees ruling.

The legislation will allow affected pension schemes to retrospectively obtain written actuarial confirmation that historic changes to scheme rules met the required standards. The new legislation is hoped to provide clarity to affected schemes, we have therefore assumed that there will be no impact on the LGPS as a result of the ruling.

Appendix 4 Gender Pensions Gap

On 15 May 2025, Government launched a consultation on changes to the Local Government Pension Scheme (LGPS) in England and Wales. The proposed changes are intended to improve fairness in and access to the LGPS. The proposals include addressing survivor pensions and deaths grants and addressing the Gender Pension Gap in the LGPS.

As required under the LGPS Regulations 2013, we have reported on the gender pensions gap within the fund. The reporting approach, including derivation of statistics, is consistent with the guidance '2025 Fund Valuations: Guidance for Gender Pension Gap reporting' dated 2 February 2026.

For the purpose of this analysis, we have relied upon the membership data provided by the Fund for the purpose of the 2025 actuarial valuation.

The Gender Pensions Gap (GPG) is calculated as:

$$GPG = \frac{\text{Mean pension value for males} - \text{Mean pension value for females}}{\text{Mean pension value for males}}$$

The GPG is expressed as a percentage. For example, a GPG of 10% indicates that, on average within the population analysed, for every £1 of pension accrued by males, females will have accrued £0.90.

Active members

The results in this section set out the analysis for members who were active at 31 March 2025. Please note that the number of active members in the table below will differ from the total number of active records as set out in Appendix 1, as in the Gender pension gap (GPG) analysis we have treated members with multiple records as a single member.

Fund level analysis

At overall fund level, the gender pensions gap (GPG) for active members of the Fund is 38%. Further detail is set out in the table below.

Gender pension gap for active members	Number of members	Percentage of overall membership	Mean age	Mean FTE pay (£)	Mean actual pay (£)	Mean CARE pension (£)	Mean Final Salary pension (£)	Mean combined pension (£)
Females	7,539	75%	47	£40,828	£28,424	£3,497	£4,774	£4,578
Males	2,505	25%	45	£51,785	£37,909	£5,178	£8,349	£7,391
			Gender gap	21%	25%	32%	43%	38%

Charts of mean pensionable pay and mean active member total pension for males and females by age are shown below.

Employer category analysis

In line with the Guidance, analysis at employer category level is set out below and overleaf.

Local authorities and connected bodies (SF3 number 1)

All local authority maintained schools have been aggregated with their corresponding local authority for the purposes of this analysis.

GPG for local authorities and connected bodies	Number of members	Percentage of overall membership	Mean age	Mean FTE pay (£)	Mean actual pay (£)	Mean CARE pension (£)	Mean Final Salary pension (£)	Mean combined pension (£)
Females	5,181	74%	47	£42,002	£29,638	£3,804	£5,198	£5,096
Males	1,844	26%	45	£55,215	£40,903	£5,655	£9,301	£8,183
			Gender gap	24%	28%	33%	44%	38%

Centrally funded public sector bodies excluding academies (SF3 number 2, local authority indicator 1)

GPG for centrally funded public sector bodies (exc. academies)	Number of members	Percentage of overall membership	Mean age	Mean FTE pay (£)	Mean actual pay (£)	Mean CARE pension (£)	Mean Final Salary pension (£)	Mean combined pension (£)
Females	99	71%	49	£33,319	£19,137	£2,419	£2,872	£3,173
Males	40	29%	50	£44,644	£33,530	£6,452	£4,486	£8,807
			Gender Gap	25%	43%	63%	36%	64%

Academies (SF3 number 2, local authority indicator 2)

GPG for academies	Number of members	Percentage of overall membership	Mean age	Mean FTE pay (£)	Mean actual pay (£)	Mean CARE pension (£)	Mean Final Salary pension (£)	Mean combined pension (£)
Females	1,583	79%	46	£33,024	£21,730	£2,230	£2,425	£2,577
Males	411	21%	43	£41,962	£27,016	£3,036	£5,748	£3,890
			Gender Gap	21%	20%	27%	58%	34%

Private/voluntary/other bodies (SF3 number 4)

GPG for other private/voluntary/other bodies	Number of members	Percentage of overall membership	Mean age	Mean FTE pay (£)	Mean actual pay (£)	Mean CARE pension (£)	Mean Final Salary pension (£)	Mean combined pension (£)
Females	676	76%	45	£43,566	£36,156	£4,264	£4,998	£5,491
Males	210	24%	49	£39,820	£33,772	£4,938	£5,418	£7,027
			Gender Gap	-9%	-7%	14%	8%	22%

Pensioner members

The GPG for pensioner members of the Fund is 51%. Further detail is set out in the table below.

Gender pension gap for pensioner members	Number of members	Percentage of overall membership	Mean age	Mean pension (£)
Females	6,270	66%	73	£6,276
Males	3,248	34%	74	£12,859
			Gender Gap	51%

A chart of mean total pension for males and females by age is shown below.

Appendix 5 Climate risk analysis

Climate risk is an important consideration for the 2025 valuation. We have carried out scenario analysis on the assets and liabilities of the Fund in-line with the Key Principles drafted by the four actuarial firms who advise the LGPS funds and agreed with the Government Actuary's Department (GAD) for the purpose of the 2025 LGPS valuations in England and Wales. Further information can be found on the climate scenario analysis report dated 31 October 2025.

We have also considered the requirements under the Occupational Pension Schemes (Climate Change Governance and Reporting) Regulations 2021 although these regulations do not apply to the LGPS. This is because we anticipate that the equivalent regulations that could ultimately apply to the LGPS will contain similar requirements.

The analysis considered the projected funding level under various climate-related scenarios, alongside the agreed 2025 valuation basis for the Fund. The results thereby allow the administering authority to consider whether the 2025 valuation funding strategy is sufficiently robust in the context of this climate scenario analysis and any potential contribution impacts.

The climate scenarios within Barnett Waddingham's in-house climate scenario framework include three climate scenarios which have been provided by Moody's Analytics and are broadly based on scenarios from the Network for Greening the Financial System (NGFS). A brief description of these scenarios is set out below:

- 1 Base case** – we have assumed the Fund's best estimate funding basis as the base case scenario. All other scenarios are considered relative to this base case, using the relative difference in returns and financial assumptions between Moody's own base case, and each climate scenario.
- 2 Delayed transition** – additional policy implementation is delayed until 2030. Stronger policies are required (versus a scenario whereby policy implementation is not delayed), such as a higher effective carbon price, in order to limit global temperature rises to below 2.0°C.
- 3 Current policies** – no new climate policies are introduced beyond the current policies in place, resulting in a lower effective carbon price, but also a growing concentration of greenhouse gas emissions and a larger increase in global temperatures, relative to a transition scenario.
- 4 Fragmented world** – additional policy implementation is delayed and diverges globally. Those countries with net-zero targets are assumed to meet c.80% of their target, whilst those without follow current policies.
- 5 Late and inadequate action** – this scenario has been created by Barnett Waddingham, and takes the highest negative return impact, on an annual basis, across the other three scenarios. The scenario is assumed to exhibit a mixture of characteristics from the above scenarios (i.e. delayed transition and high temperature rises).

The impact on the funding position of each scenario is considered in the graph below.

Limitations of the analysis

Our quantitative analysis does not consider the impact of many risks associated with climate change due to the current lack of robust data. Examples include certain investment risks and a degree of inflation risk (we believe these are quantified within the model to some extent, but not fully), litigation risk, political risk and geopolitical risk. Furthermore, it is widely believed that climate scenarios fail to exhaustively model transition and physical risks and the impact of tipping points is not included in the data.

Climate scenario modelling is in its infancy and is expected to undergo significant development over time and data quality is generally considered spurious. We intend to develop and build upon this analysis over time as data quality and availability improves. Our analysis recognises these limitations and has addressed them by combining the quantitative and qualitative analyses in the comprehensive report dated 31 October 2025.

Appendix 6 Decisions Log

The triennial actuarial valuation is a significant exercise carried out by the Fund. This report is a summary of the main outputs from the triennial actuarial valuation. The outputs are the result of funding strategy analysis, discussions and Fund decisions throughout the valuation process.

A high-level audit trail of the key funding strategy decisions is set out below.

Funding strategy

The actuarial assumptions were reviewed by Fund officers in August 2025, supported by analytics and other information from the Fund Actuary. The proposed assumptions, including the level of prudence, were agreed at the Pensions Committee meeting on 11 September 2025, alongside proposed changes to the Funding Strategy Statement.

The funding strategy parameters, including management of surpluses (where present) and prudence levels, both of which feed into the setting of employer contribution rates, were reviewed by Fund officers and agreed in October 2025, alongside the proposed mortality assumptions. The low-risk assumptions used for cessation valuations were reviewed and agreed at the 10 March 2026 Joint Pensions Committee meeting.

The outcomes of these decisions were collated and documented in an updated copy of the Funding Strategy Statement. The final version was agreed at the 10 March 2026 Joint Pensions Committee meeting after stakeholder engagement – see below.

Stakeholder engagement

In addition, the Fund has engaged with employers, the Local Pensions Board and other stakeholders – such as the Department for Education in their role as guarantor for further education colleges and academy trusts participating in the LGPS – throughout the valuation exercise.

A summary of the engagement is detailed below.

- Employer forum: the employers forum in October 2025 discussed the key outcomes and project timescales for the 2025 valuation and provided an opportunity for employers to ask questions.
- Funding Strategy Statement consultation: an updated version of the FSS was issued to employers on 10 November 2025 with the opportunity to feed back comments or ask questions to the Fund by 19 December 2025.
- Employer results: a results schedule setting out their 2025 valuation funding position and contribution rate was issued to relevant employers.

Gender pension gap statistic - Fund pensioner mean pension GPG	%	51.2%	n/a

Appendix 8 Rates and Adjustments Certificate

Regulatory background

In accordance with Regulation 62 of the Local Government Pension Scheme Regulations we have made an assessment of the contributions that should be paid into the Fund by participating employers for the period 1 April 2026 to 31 March 2029.

The method and assumptions used to calculate the contributions set out in the Rates and Adjustments Certificate are detailed in the Funding Strategy Statement and in Appendix 2 of this report.

The primary rate of contribution as defined by Regulation 62(5) for each employer for the period 1 April 2026 to 31 March 2029 is set out in the table below. The primary rate is the employer’s contribution towards the cost of benefits accruing in each of the three years beginning 1 April 2026. In addition each employer pays a secondary contribution as required under Regulation 62(7) that when combined with the primary rate results in the minimum total contributions as set out below and overleaf. This secondary rate is based on their particular circumstances and so individual adjustments are made for each employer.

Primary and secondary rate summary

The primary rate for the Fund is the theoretical primary rate of all employers in the Fund assessed on the ongoing basis using the assumptions summarised in Appendix 2 and is 15.8% p.a. of payroll.

The secondary rates across the entire Fund (as a percentage of projected Pensionable Pay and as a monetary amount) in each of the three years in the period 1 April 2026 to 31 March 2029 is set out in the table below. These amounts reflect the individual employers’ recovery plans.

Secondary contributions	2026/27	2027/28	2028/29
Total as a % of payroll	-0.6%	-0.6%	-0.6%
Equivalent to total monetary amounts of	-£2,013,000	-£2,087,000	-£2,164,000

General notes

Employers may pay further amounts at any time and future periodic contributions, or the timing of contributions, may be adjusted on a basis approved by us as the Fund Actuary. The administering authority, with the advice from us as the Fund Actuary may allow some or all of these contributions to be treated as a prepayment and offset against future certified contributions.

The certified contributions include an allowance for expenses and the expected cost of lump sum death benefits but exclude early retirement strain and augmentation costs which are payable by participating employers in addition.

The monetary amounts are payable in 12 monthly instalments throughout the relevant year unless agreed by the administering authority and an individual employer.

Employer code	Employer name	Primary rate (% pay)	Secondary rate (% pay plus monetary adjustment)			Total contributions i.e. primary (% of pay) plus secondary

Post valuation employers

The following employers joined the Fund on or after 1 April 2025 and their rates were certified at their date of joining.

The table summarises the contributions required from these employers from 1 April 2025 where known.

Employer code	Employer name	Primary rate (% pay)	Secondary rate (% pay plus monetary adjustment)			Total contributions i.e. primary (% of pay) plus secondary		
			2026/27	2027/28	2028/29	2026/27	2027/28	2028/29
<i>Funding Pool</i>	<i>London Borough of Richmond Upon Thames</i>							
981	Greenwich Leisure Limited (Richmond)	19.0%	-	-	-	19.0%	19.0%	19.0%
<i>Funding Pool</i>	<i>Wandsworth academies or free schools funding pool</i>							
156	Fircroft Primary School	16.5%	-	-	-	16.5%	16.5%	16.5%

Any employer that joined the Fund after 31 March 2025 and is not listed above will be advised of their contribution rates separately.
